HEIRLOOM VEGETABLES & WILDFLOWER SEEDS

www.bbbseed.com

GROW. ENJOY. SHARE.

GROW. ENJOY. SHARE. The Beauty and The Bounty.

Welcome to our 2015 catalog ... Few things in nature exhibit the breathtaking beauty you can create with the seeds from one of our packets. Follow the instructions, and with a little luck you should see a dazzling display of blooms within 8 to 10 weeks. Most of these will be annuals because few perennials bloom their first year. After the second season, you will truly see why we named our wildflower seed, "Beauty Beyond Belief!" All of our wildflower seed varieties have been selected for their ability to grow in a variety of conditions. Many of the types we offer should do very well throughout the United States. Most wildflowers grow best in sunny locations, but many tolerate partial shade. Please read the text with each seed packet to select an appropriate mix for your project site.

2015 TABLE OF CONTENTS

OUR STAFF	2
HEIRLOOM VEGETABLES.....	3-8
PLANTING INSTRUCTIONS, NATIVES	9

Beauty Beyond Belief™ Wildflower Seed and seed mixes are of superior quality and are carefully chosen based on purity and viability standards, essential elements for a successful, beautiful and self-sufficient landscape. Our seed mixes include no fillers or inert materials. Please look for Beauty Beyond Belief Seeds at your local nursery or garden center.

OUR GUARANTEE: We guarantee all of our products unconditionally with no hassles. If any purchase does not meet your standards, simply return it for an exchange of the full purchase price. We understand the importance of high quality and we guarantee that our seed is of the highest quality with no fillers added to our mixes.

About Heirloom Vegetable Seeds ...

An heirloom vegetable is an open-pollinated variety that has been passed down from generation to generation and, in some cases, can be traced back hundreds of years. There are landrace varieties that developed by adaptation to the natural and cultural environment in which they live and some are a more formal breed which have been bred deliberately to conform to a particular standard

type. These seed lines have been carefully selected to maintain uniformity and consistency for germination. Heirloom seeds become 'heirloom' because they exhibit exceptional traits desired by the gardener. Often this means the plants are more colorful, flavorful, unique, or have great germination and vigor. Often the traits are location dependent, meaning, seeds planted in one garden will not produce in the same manner in another location. Some seeds from vegetables grown for generations in other countries were brought to North America and slowly developed for success in these latitudes and soil types.

We encourage you to try heirloom seeds, to see which have the qualities for your area to become your favorites and to make them into your own

very special seed line. Gardeners have found that as seed is selected and saved over many years, production is increased and the quality is improved, creating plants that will produce best for that locale and will resist diseases and pests of that locale.

Contributing to genetic diversity strengthens the ecosystem. Historically farmers and local gardeners have created and sustained this rich genetic heritage by learning to save their own seeds from varieties that perform best in their own mini-ecosystems. The current trend toward mono crops where only one seed type is used to produce a crop worldwide is eliminating the ability to be able to find genetic variations that will withstand emerging pathogens and climate changes. We encourage you to try heirloom seeds, to see which have the qualities to become your favorites for your own very special seed line.

SAVING SEEDS IS EASY AND FUN!

BLUE LAKE BUSH BEAN • Snap bean, smooth, round, meaty pods

CONTENDER BUSH BEAN • Early snap bean, good for cool, short seasons

ROYAL PURPLE BUSH BEAN • Snap bean, high yielding, colorful

KENTUCKY WONDER POLE BEAN • Snap bean, smooth, round, meaty pods

GOLDEN WAX BEAN • Snap bean, stringless, colorful, meaty pods

MARDI GRAS BEAN BLEND • Colorful snap beans, good for containers

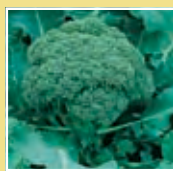

CHIOGGIA BEET • Colorful, tender, delicious flavor

DETROIT DARK RED BEET • Reliable, tender, beautiful deep red color

GOLDEN DETROIT BEET • Sweet, easy, reliable

CALABRESE GREEN SPROUTING BROCCOLI • Large, compact heads, easy

SPRING RAPINI BROCCOLI RAAB • Snap beans, early, loose heads, tasty leaves

ROMANESCO BROCCOLI • Beautiful heads, frost tolerant, nutty flavor

LONG ISLAND BRUSSELS SPROUTS • Cold hardy, heavy producer

BABY CHOY CABBAGE • Crisp, mild, compact

FLAT DUTCH CABBAGE • Vigorous, flattened compact heads

RED DRUMHEAD CABBAGE • Full round heads, colorful, easy

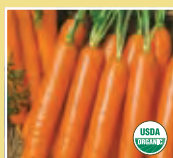

ATOMIC RED CARROT • Colorful, nutritious, sweet

COSMIC PURPLE CARROT • Sweet, colorful, coreless

DANVERS 126 1/2-LONG CARROT • Uniform, sweet, reliable

LITTLE FINGER BABY CARROT • Bright, sweet, great for snacking

ROYAL CHANTENAY CARROT • Crisp, short, tender

SCARLET NANTES CARROT • Long, tapered, sweet

RAINBOW BLEND CARROTS • Long tapered, colorful mix

EARLY SNOWBALL CAULIFLOWER • Nutty, early, uniform

COUNTRY GENTLEMAN SWEET CORN • Creamy white, irregular kernel pattern, sweet

GOLDEN BANTAM SWEET CORN • Plump, juicy, tender, golden kernels

INDIAN MIX ORNAMENTAL CORN • Rich colors to use for fall decorations

STRAWBERRY ORNAMENTAL POP CORN • Small kernels for popping beautiful color,

BOSTON PICKLING CUCUMBER • Vigorous, small, crisp

LEMON CUCUMBER • Sweet, good for short seasons, easy

MARKETMORE 76 CUCUMBER • Crisp, sweet, slicing variety

SPACEMASTER 80 CUCUMBER • Heat tolerant, compact, good for containers

SUYO LONG CUCUMBER • Heat tolerant, burpless, crisp

BLACK BEAUTY EGGPLANT • Firm, plump, rich color

LONG PURPLE EGGPLANT • Prolific, great for containers, decorative

BATAVIAN ENDIVE • Creamy, mild centers, good for short growing seasons

SMALL GOURDS MIXTURE • Bright, wide variety, decorative

HERB, WILD ARUGULA • Peppery, easy, flavorful

HERB, DARK PURPLE OPAL BASIL • Striking color, rich flavor, compact plants

HERB, LEMON BASIL • Fragrant, lemony flavor, great containers

HERB, SWEET BASIL • Aromatic, warm rich flavor, classic

HERB, GARLIC CHIVES • Aromatic mild, perennial

HERB, STANDARD CHIVES • Aromatic easy, perennial

HERB CORIANDER/ CILANTRO • Rich flavor, slow bolting

HERB, BOUQUET DILL • Flavorful leaves, reliable

HERB, FLORENCE FENNEL • Crisp, mild, sweet

HERB, OREGANO VULGARE • Easy pungent, good for containers

HERB, ITALIAN GIANT PARSLEY • Rich, large leafed, nutritious

HERB, BROADLEAF SAGE • Perennial, flavorful, easy

HERB, THYME • Heat loving, easy, fragrant

LACINATO KALE

• Cold hardy, tender, meaty leaves

LACINATO KALE

- ORGANIC • Cold hardy, tender, meaty leaves

RED RUSSIAN KALE

• Colorful, great in an edible landscape

RED RUSSIAN KALE

- ORGANIC • Colorful, great in an edible landscape

AMERICAN FLAG LEEK

• Mild, hardy, reliable

SPECKLES BIBB LETTUCE

• Colorful, buttery flavor, compact heads

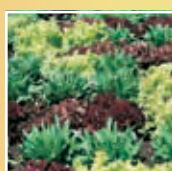

SUMMER BIBB LETTUCE

• Heat resistant, buttery flavor, compact heads

ALL SEASON LETTUCE SAMPLER

• Heat/drought tolerant, good for succession planting, 4 heirloom varieties

GOURMET SALAD BLEND LETTUCES

• Five varieties, great textures and colors

HEIRLOOM BLEND LETTUCES

• Five varieties for color, flavor and texture

BLACK SEEDED SIMPSON LETTUCE

• Reliable, quick to mature, tender

RED DEER TONGUE LEAF LETTUCE

• Beautiful color, cold hardy, meaty

RED OAK LEAF LETTUCE

• Colorful, tender, sweet, slow to bolt

TANGO LEAF LETTUCE

• Ruffled texture, tender, bright flavor

DARK GREEN ROMAINE LETTUCE

• Crisp, mild, compact

FRECKLES ROMAINE LETTUCE

• Crisp, beautiful, heat tolerant

GREEN FLESH HONEYDEW MELON

• Sweet, juicy, mild, disease resistant

HEARTS OF GOLD CANTALOUPE

• Fragrant, sweet, large with thin rind

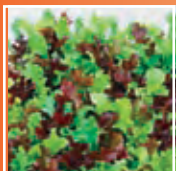

MINNESOTA MIDGET MUSK-MELON

• Early bearing, prolific, extra sweet

MESCLUN GREENS BLEND

• A variety of arugula, chinese mustards and cabbages

MICRO GREENS BLEND

• A variety of beets, lettuces, arugula, chards and mustards

MIZUNA MUSTARD

• Pepper flavor, decorative, productive

CLEMSON SPINELESS OKRA

• Versatile, heat loving, decorative plant

TOKYO LONG WHITE BUNCHING ONION

• Sweet, mild, good for most climates

GREEN ARROW SHELLING PEA

• Cold hardy, prolific, sweet flavor

DWARF GREY SUGAR SNOW PEA
• Edible, flat pods, tender, sweet

OREGON SUGAR POD II SNOW PEA
• Heavy producer, tender, flat pods, disease resistant

SUGAR ANN SNAP PEA • Meaty, tender, sweet, compact vines

CALIFORNIA WONDER SWEET PEPPER • Productive, sweet, mild, crisp

GOLDEN CALWONDER SWEET PEPPER
• Thick walled, sweet, beautiful

MINI BELL SWEET PEPPER BLEND
• Sweet and fragrant, great for containers

ORANGE SUN SWEET PEPPER • Sweet, beautiful color, thick walls

CHOCOLATE SWEET PEPPER • Great color, sweet, early maturing

ANAHEIM CHILI PEPPER • Mild, flavorful, heat tolerant

EARLY JALAPENO CHILI PEPPER • Spicy, prolific, heat tolerant

FIESTA CAYENNE CHILI PEPPER BLEND
• Heirloom fun colors, cayenne pepper varieties

ORANGE HABANERO CHILI PEPPER
• Fruity flavor, very hot, colorful

SERRANO CHILI PEPPER • Medium hot, fragrant, meaty

BIG MAX PUMPKIN
• Huge, pinkish-orange color, meaty

CINDERELLA PUMPKIN
• Deep red-orange color, best for pies

CONNECTICUT FIELD PUMPKIN • Multi-use, bright orange, 12-15 lbs

JACK B LITTLE PUMPKIN • Petite, 3 inch, edible, decorative

JACK O'LANTERN PUMPKIN • Multi-use, great for carving, thick walled

CARNIVAL RADISH MIX • Early, 4 colorful varieties, round, crisp

CHERRY BELLE RADISH • Cold hardy, quick to mature, crisp, mild

FRENCH BREAKFAST RADISH • Early, mild, beautiful color

WHITE ICICLE RADISH • Unique color, mild, crisp, long tapered root

BLOOMSDALE SPINACH • Thick, curly leaves, fast growing, cold tolerant

NOBEL GIANT SPINACH • Thick, smooth leaves, heavy yield, good for freezing

BLACK BEAUTY ZUCCHINI
SUMMER SQUASH • Easy, prolific, early maturing, deep green color

EARLY YELLOW STRAIGHTNECK SUMMER SQUASH • Prolific, tender early, easy to pick

JAUNE ET VERTE SUMMER SQUASH • French pattypan prolific, tender, early maturing

YELLOW CROOKNECK SUMMER SQUASH • Easy, classic to grow, cont'd production

BABY GREEN HUBBARD WINTER SQUASH • Sweet rich flavor, stores 10-12", fine-grained

RED KURI WINTER SQUASH • High yields, rich, sweet flavor, fine-grained

TABLE QUEEN ACORN WINTER SQUASH • Firm, sweet flesh, stores well, thick walls

BUTTERNUT WINTER SQUASH • Sweet, nutty flavor, stores, thick walls, creamy

VEGETABLE SPAGHETTI WINTER SQUASH • Vigorous, crisp, versatile, stores

RAINBOW SWISS CHARD • Cold and heat tolerant, great for braising, decorative

TOMATILLO VERDE • Tart, citrus flavor, productive, light green color

AMISH PASTE TOMATO • Meaty flesh, great for sauces, prolific

AUNT RUBY'S GERMAN GREEN TOMATO • Sweet, spicy, popular heirloom beefsteak

BEEFSTEAK TOMATO • Rich, meaty flesh, great slicing or sauces

BLACK KRIM TOMATO • Heavy producer, medium sized, sweet, indeterminate

CHEROKEE PURPLE TOMATO • Disease resistant, rich, sweet flavor, firm, indeterminate

HEIRLOOM TOMATO BLEND • 8 varieties provide rich, complex flavors and colors

PINK BRANDYWINE TOMATO • Good for slicing, superior flavor, meaty

RED CHERRY TOMATO • Sweet, early producer, indeterminate

RED PEAR TOMATO • Sweet, extremely prolific, indeterminate

YELLOW BRANDYWINE TOMATO • Late season, creamy flavor, large, dense

YELLOW PEAR TOMATO • Easy to grow, low acid, prolific

PURPLE TOP WHITE GLOBE TURNIP • Crisp, versatile, mild flavor, good in cool weather

CRIMSON SWEET WATERMELON • Medium sized, very sweet, bright red flesh, small seeds

GOLDEN MIDGET WATERMELON • Golden rind with rosy red flesh, good for short seasons and containers

SELECTION OF SITE AND SEED

The best flower garden/meadow results will be obtained on a project site that is free of weeds, sunlit, level, and well drained. However, project sites rarely have all of these qualities. Wildflowers and wildflower/grass mixtures often grow better in poor quality soil and, can withstand drought conditions. The best seed mixture should be selected based on the unique properties of the project site, including its geographic region, exposure/sun (aspect), slope, availability of moisture, and residential codes. Roadsides, heavy use or urban areas may require a low-growing mix that has a natural look while maintaining a shorter profile. Other mixes are specially blended to include species that attract birds, hummingbirds, butterflies and bees. Project sites in dry (xeric) areas require species that thrive during times of drought. Special consideration must be taken to ensure that the project site will have adequate moisture during germination and the first growing season. Beauty Beyond Belief's high quality seeds are carefully chosen based on purity and viability standards and include no fillers or inert materials. We create our wildflower mixes for the growing conditions in specific regions based on geography, elevation, rainfall, humidity, and annual temperature range. These mixes include annuals, perennials, native, and introduced species to establish a strong stand and provide an extensive range of bloom time and color. The annuals included in our mixes provide vibrant color, soil stability, shade and guard against weed invasion for the slower growing perennial species. Some annuals may re-seed and return for a few more seasons. The perennials will bloom during the second and following years.

WHEN TO PLANT

Climate (especially rainfall) should be used to determine the optimum time for seeding the project site. Plant just before the beginning of the rainy season if there will be no supplemental irrigation, usually that is spring, after the last frost date. Check with the local Agriculture Extension Office or Natural Resources Conservation Service Office for the average 'last frost date' in the project site area. With supplemental irrigation, wildflowers and mixes can be planted through spring and into early summer up to 9-10 weeks before the first fall frost. Late fall is also a great time to plant allowing seeds to overwinter and sprout during the next spring. Seeds may be planted during the winter when the ground is workable and where temperatures remain below freezing. Fall and winter plantings are appropriate for areas that will not receive supplemental irrigation but will rely on the subsequent spring rainy season. In mild climates where there is no chance of freezing, plant in the fall before periods of expected rainfall.

SITE PREPARATION

The success of your wildflower garden is dependent on your preparation and weed control. Proper planning will bring hardy, long lasting beauty. Aggressive choking grasses should be removed. Eliminate all weeds. A good way to do this is to cover the ground with black plastic cloth to bake out the existing

weeds, or better yet, allow weeds to germinate and then shallowly till under. Tilling the soil deeper may promote the germination of dormant weed seeds present in the topsoil. Doing this several times will get rid of the weed seeds in the top few inches of soil. If no weeds are present, the soil should be only lightly tilled if hard packed; otherwise, roughen the surface to promote good seed to soil contact. Soil amendments and fertilizers are probably unnecessary and fertilizer will promote weed growth and compromise bloom time. A low nitrogen fertilizer may be used on excessively poor soils.

PLANTING METHODS

Follow the suggested planting rates and methods for the wildflower seed species and wildflower mixes that are printed on each package label and can be found on our website under 'Wildflower Tips'.

SITE MAINTENANCE

Maintenance and weed control are essential to the creation and propagation of a luxurious wildflower display. Quickly growing, vigorous annuals in the seed mix will provide shade for the slow growing perennials and can suppress weed growth. Pull weeds as soon as they are identified or cut them off so they will not produce seed. The project site should fill in over the following years as the perennial wildflowers becoming established. Annuals will often re-seed themselves. Additional seeding may be needed for bare spots or to achieve the original colorful display of annuals. Mow to a height of 6 inches in the late fall after the seeds have matured and the leaves have turned brown, thrashing the seed pods to scatter the seeds for next year's germination.

ADDING NATIVES TO YOUR LANDSCAPE

Wildflowers are some of the greatest treasures of nature. A native wildflower or indigenous species are those flowers (forbs) that originate from a defined geographical area and have adapted, through natural selection, to the regional environmental conditions. These spectacular plant species are naturally suited to grow in specific regions, and offer many benefits that introduced or exotic species don't offer. Once established, native wildflowers require less water, fertilizer, and pest control because they have adapted to survive without the supplemental care usually needed by introduced or exotic species. So, how do you go about finding out what is native in your area, and what's not? Your local University Agricultural Extension Office will have a detailed list of native forbs (wildflowers). Another option is to contact your state's native plant society. Next, check the species available in our catalog and our website at www.bbbseed.com, to find the available natives for your area.

Go Wild and Go Native!

All Annuals Mix

This mixture will provide a quick burst of vibrant color. Over seed your established wildflower bed or meadow for extra color.

Bee Rescue Mix

This colorful combination of wildflowers will provide nectar and pollen for full season support of native and introduced bee species.

Pollinator Mix!

Butterfly and Birds Mix

Specifically designed to attract butterflies with a succession of blooms from Spring to Fall and a variety of birds to the seeds. Mix insures adaptability to many regions.

Pollinator Mix!

Deer Resistant Mix

This mix includes species that deer and elk will usually avoid if other preferred forage is available. Most of the perennials will begin blooming the second year.

Drift of Gold Wildflower Mix

This mix of 80 % perennial, drought tolerant wildflowers is great for establishing the warm hues of mid-summer to fall color with a touch of lavender and accents of white. This mix will do well even at higher altitudes. Zones 3-7

Drought Tolerant Mix

Ideal for areas along paving or areas with low annual rainfall, this selection of annuals and perennials grow well in sunny, dry areas.

Fragrant Mix

These aromatic wildflower species should be planted near sitting areas and walkways and will be a delight in your garden!

Great Plains Prairie Mix

This mixture of native flowers from the Great Plains contains annuals and perennials.

High Altitude Mix

This mix has been carefully selected for good germination and growth at altitudes of 7,000-11,000 feet.

Honey Source Mix

A long blooming mix of beautiful, nectar and pollen rich annuals and perennials put together just for our Honeybee friends.

Pollinator Mix!

Hummingbird Mix

These colorful annuals and perennials will soon lure hummingbirds to your garden with their nectar rich blooms.

Pollinator Mix!

Low Growing Mix

This beautiful mixture of short wildflower species will reach a mature height of 6-12 inches.

Parade of Poppies

This vibrant mixture of poppy species will provide both instant and long lasting color.

Shade Mix

This mixture of wildflower species is perfect for a variety of partially-shaded areas.

Sunflower Mix

A fun mix of annual Sunflowers. Blooms from mid-summer into fall and can be grown in most areas of the country. Great for cut flowers!

Arizona Wildflower Mix

This hardy mixture of annuals, perennials, native and introduced wildflowers is designed for AZ wildflower gardens below 7,500 feet.

California Wildflower Mix

A colorful mix of annuals, perennials, native and introduced wildflowers designed to tolerate the diverse mix of climates found in CA.

Colorado Wildflower Mix

Brighten gardens, meadows and containers up to 7,500 feet elev. Also available in a "Livestock safe" version without Lupines or Larkspurs.

Idaho Wildflower Mix

A stunning mix of annuals, perennials, native and introduced wildflowers. available in a "Livestock safe" version without Lupines or Larkspurs.

Midwest Wildflower Mix

Species that love the varied conditions of the Midwest and will brighten gardens, containers, and meadows everywhere become established and bloom in subsequent years.

Montana Wildflower Mix

The bright colors and varied textures to create a beautiful meadow or flower bed. Also available in a "Livestock safe" version without Lupines or Larkspurs.

Nebraska Wildflower Mix

This hardy mixture designed for NB wildflower gardens. Perfect to combine with a native grass seed mixture for a natural meadow effect.

Nevada Wildflower Mix

A colorful mixture designed for areas of NV under 7,500 feet.

New Mexico Wildflower Mix

A mix that will create beautiful gardens and meadows designed for areas of NM under 7,500 feet.

Northeastern Wildflower Mix

A unique blend of species adapted for humid summers and variable winter conditions found in this area.

Oregon Wildflower Mix

A spectacular mix native and introduced wildflowers that are known to grow well here. Includes annuals and perennials.

Pacific Northwest Wildflower Mix

A mixture designed to tolerate the cooler, humid conditions typical to the Pacific Northwest from Northern California to Vancouver.

Rocky Mountain Wildflower Mix

A beautiful display of species found along the basin and range areas of the Rocky Mountains. This is a great mix for foothills gardens and meadows.

Sierra Nevada Wildflower Mix

A mixture of native and introduced wildflowers known to grow well in the higher elevations and dry summers this region.

Southeastern Wildflower Mix

This mix of annuals, perennials, native and introduced wildflowers is designed to withstand the hot, humid summers of the Southeastern states.

Southwestern Wildflower Mix

This mixture of annuals, perennials, native and introduced wildflowers will tolerate a variety of hot and dry conditions.

Texas-Oklahoma Wildflower Mix

A beautiful mix of annual and perennial species. Found in the TX and OK regions. A mixture to add delightful color to any garden or meadow.

Utah Wildflower Mix

Designed with species known to grow well in UT under 7,500 ft Many will bloom the first year. Also available in a "livestock safe" version without Lupines or Larkspurs.

Washington Wildflower Mix

A beautiful mix formulated for areas of eastern and central WA below 7500 feet elevation.

Western Trails Wildflower Mix

Xeric species for western desert areas under 7,500 elev. Can mix with "Western Trails Native Grass Seed Mix". Will need two seasons to establish and bloom.
Zones 4-9

Wyoming Wildflower Mix

A mixture of native and introduced wildflowers that grow well in WY. Also available in a "livestock safe" version without Lupines or Larkspurs.

The recommended seeding rates are:

- 1 oz. covers 100 sq. ft.
- 4 oz. covers 375 sq. ft.
- 8 oz. covers 750 sq. ft.
- 1 lb. covers 1,500 sq. ft.

All of our Special Use and Regional Mixes are available for retail displays in 1 oz., 4 oz., 8 oz. and 1 lb. bags.

Please visit our website at
www.bbbseed.com for more information
and to see the species currently included
in each wildflower seed mix.

GRASS MIXES

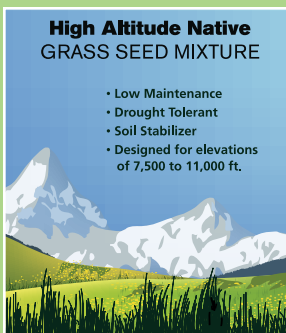

See Price Sheets for Complete Listing

GROW. ENJOY. SHARE.

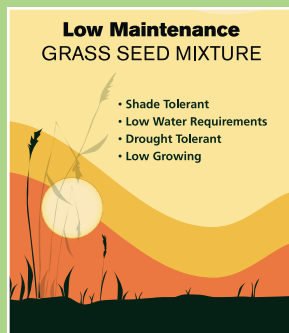

Custom Colorado Native GRASS SEED MIXTURE

- Native Grasses
- Drought Tolerant
- Low Maintenance
- Good to 7,500 ft.

High Altitude Native GRASS SEED MIXTURE

- Low Maintenance
- Drought Tolerant
- Soil Stabilizer
- Designed for elevations of 7,500 to 11,000 ft.

Low Maintenance GRASS SEED MIXTURE

- Shade Tolerant
- Low Water Requirements
- Drought Tolerant
- Low Growing

This mix is comprised of native grasses which, once established, are drought-tolerant and require lower maintenance than most other grasses. Mature height is 12-18 inches.

Colorado Native Grasses:

Sideoats Grama, Little Bluestem, Sand Dropseed, Buffalo Grass, Green Needle Grass, Indian Ricegrass, Sheep Fescue, Wild Ryegrass, Slender Wheatgrass, Perennial Rye, Western Wheatgrass.

Seeding Rate: 2 lbs. per 1,000 sq.ft. or 4 lbs. for a thicker stand.

This mix is comprised of 80% native grasses commonly found in elevations above 8,000 feet. Once established, it is drought-tolerant and requires far less maintenance than other 'introduced' grasses. Mature height is 12-18 inches.

High Altitude Grasses:

Sheep Fescue, Wild Ryegrass, Slender Wheatgrass, Perennial Ryegrass, Canada Bluegrass, Rocky Mountain Fescue, Alpine Bluegrass, Prairie Junegrass, Mountain Brome, Idaho Fescue, Tufted Hairgrass, Blue Fescue.

Seeding Rate: 2-3 lbs. per 1000 sq.ft. or 25 lbs. over one acre for a more 'open meadow' effect.

This mix is intended for those areas that require low maintenance. Mature height is 6-12 inches. Color stays dark green through late fall. An excellent mix to combine with wildflower for creating a 'meadow' effect.

Low Maintenance Grasses:

Chewings Fescue, Sheep Fescue, Creeping Red Fescue, Canada Bluegrass, Hard Fescue, Kentucky Bluegrass, Perennial Ryegrass.

Seeding Rate: 2-3 lbs. per 1000 sq.ft. or up to 5 lbs. for a thicker stand.

GRASS/WILDFLOWER MIXES

See Price Sheets for Complete Listing

Low Maintenance Grass & Wildflower Mix

Low Maintenance GRASS & WILDFLOWERS

- LOW WATER REQUIREMENTS
- DROUGHT TOLERANT
- QUICK TO ESTABLISH

Wildflowers in mix: 50%
Seeding Rate: 1-2 lbs./1000 sq. ft.

Grasses: Sheep Fescue, Chewings Fescue, Creeping Red Fescue, Hard Fescue, Canada Bluegrass, Kentucky Bluegrass, Perennial Ryegrass.

Wildflowers: Firewheel, Plains Coreopsis, Lanceleaf Coreopsis, Blue Flax, Rocky Mountain Penstemon, Purple Coneflower, Mexican Hat, Black-eyed Susan, Liatris, Indian Blanket, Purple Prairie Clover, Wallflower, Desert Bluebells, Shasta Daisy.

Economy Grass & Wildflowers Mix

Economy Meadow GRASS & WILDFLOWERS

- HARDY
- GREAT FOR SOIL STABILIZATION
- PLANT IN EARLY SPRING OR SUMMER
- HEIGHT: 12-36"

Wildflowers in mix: 25%
Seeding Rate: 1-2 lbs./1000 sq. ft.

Grasses: Sheep Fescue, Hard Fescue, Chewings Fescue, Perennial Ryegrass.

Wildflowers: Blue Flax, Firewheel, Indian Blanket, Red Shirley Poppy, Wallflower, Orange California Poppy, Dwarf Plains Coreopsis, Lance-leaf Coreopsis, Arroyo Lupine, Perennial Lupine, Shasta Daisy, Bachelor Button.

Native Western Grass & Wildflowers Mix

Native Western GRASS & WILDFLOWERS

- HARDY
- GREAT FOR INTER-MOUNTAIN AREAS
- PLANT IN EARLY SPRING OR SUMMER
- HEIGHT: 12-36"

Wildflowers in mix: 15%
Seeding Rate: 1-2 lbs./1000 sq. ft.

Grasses: Idaho Fescue, Arizona Fescue, Sheep Fescue, Indian Ricegrass, Streambank Wheatgrass, Spike Muhley.

Wildflowers: Blue Flax, Firewheel, Indian Blanket, Columbine, Prairie Aster, Shasta Daisy, Rocky Mountain Penstemon, Rocky Mountain Beepplant, Dwarf Plains Coreopsis.

Revegetation Grass & Wildflowers Mix

Revegetation GRASS & WILDFLOWERS

- GOOD FOR FOOTHILLS & MOUNTAINS
- DROUGHT TOLERANT & COLD HARDY
- PLANT IN EARLY SPRING OR SUMMER
- HEIGHT: 12-48"

Wildflowers in mix: 5%
Seeding Rate: 1-2 lbs./1000 sq. ft.

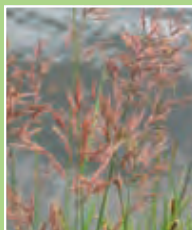

Grasses: Sheep Fescue, Tall Fescue, Chewings Fescue, Mountain Brome, Annual and Perennial Ryegrass, Crested Wheatgrass, Slender Wheatgrass, Wildrye.

Wildflowers: Bachelor Button, Black-eyed Susan, Coreopsis, Blue Flax, Firewheel, Rocky Mountain Penstemon, Orange California Poppy, Mixed Shirley Poppy, Red Shirley Poppy, Wallflower.

GRASSES (COOL SEASON)

Mountain Bromegrass

Bromus martinatus

A short-lived, bunchgrass which will establish quickly to provide cover. Does best in higher elevations (up to 10,000'), native to the inter-mountain west and shade tolerant with a shallow root system that is well adapted to thin infertile soils. Call for varieties.

Seeding Rate: Small Areas: 3-5 lbs. per 1000 sq. ft. Larger Areas: 15-20 lbs. per acre drilled; 20-30 lbs. per acre broadcast.

Indian Ricegrass

Achnatherum hymenoides

A native, cool season, very drought tolerant bunchgrass adapted to well-drained soils and is an excellent reclamation species for dry sites up to 10,000'. Seed is very slow to germinate and a fall dormant planting is often helpful to allow for stratification. Height is 1-2.5' tall, very palatable to wildlife and livestock. An excellent reclamation species on dry sites up to 10,000'. Call for varieties.

Seeding Rate: Small Areas: 1-2 lbs./1000 sq. ft. Larger Areas: 5-7 lbs. per acre drilled; 10-14 lbs. per acre broadcast.

Slender Wheatgrass

Elymus trachycaulus ssp trachycaulus

A short lived (3-5 yrs.) native bunchgrass with good seedling vigor, rapid establishment, and moderate palatability. A valuable species for mountain revegetation (up to 13,000') in areas with 10" or more of precipitation. Shade, salt and alkali tolerant. Stems have a characteristic red-purple tinge at the base. Call for varieties.

Seeding Rate: Small Areas: 3-5 lbs./1000 sq. ft. Larger Areas: 15-20 lbs. per acre drilled; 20-30 lbs. per acre broadcast.

Western Wheatgrass

Pascopyrum smithii

A long-lived, late maturing, native grass, 12-40" tall, widely distributed, winter hardy, strongly rhizomatous with coarse blue-green leaves. Excellent early forage, with higher protein content than other wheatgrasses once cured and is the most aggressive native sod grass available for excellent soil binding erosion control characteristics. Performs best in areas with over 12" of precipitation.

Seeding Rate: Small Areas: 2-3 lbs./1000 sq. ft. Larger Areas: 10-15 lbs. per acre drilled; 20-30 lbs. per acre broadcast.

Cover Crop Mix

Green Manure

This cool weather mix will provide vigorous late season growth to loosen the soil and improve drainage, provide winter erosion control and vital nitrogen, nutrients and organic matter to enrich and build the soil and control weeds. Plant this mix as a cover crop in orchards or in rotation with vegetables and field crops. Clover is also an excellent bee plant. Can be cut down and turned into the soil before seeds form.

Contents:
Winter Rye: 50%
Winter Hairy Vetch: 25%
Yellow Blossom Clover: 25%

Seeding Rate:
3-4 lbs./1000 sq ft.

Big Bluestem

Andropogon gerardii

An important native warm season plains grass that normally grows 3-8' high and recognized for its rapid growth in mid-to-late summer. It is highly palatable and provides high protein hay and good erosion control with a root system that can extend up to 12 feet. Winter hardy and suited to almost all soil types. Call for varieties.

Seeding Rate: Small

Areas: 2-3 lbs. per 1000 sq. ft. Larger Areas: 15-20lbs. per acre drilled; 20-30 lbs. per acre broadcast.

Little Bluestem

Schizachyrium scoparium

Seeding Rate: Small Areas: 1-2 lbs. per 1000 sq. ft. Larger Areas: 7-10 lbs. per acre drilled; 14-20 lbs. per acre broadcast.

Originally the most abundant of all native grasses, this warm season grass normally grows 1-3' in height and does well on deep, shallow, sandy, fine-textured or rocky soils in either uplands or lowlands. It is favored winter forage in many areas. Leaves become reddish-brown at maturity. Call for varieties.

GRASSES (WARM SEASON)

Blue Grama

Bouteloua gracilis

Blue grama is a short (6"-20"), drought tolerant, winter hardy, warm season, tufted grass that is quick to germinate. Most commonly found on prairies and up to 9,000' elev. Adapted to heavy soils, but also does well on sandy to clay soils, is tolerant of saline and alkaline soils and used for range, pasture, reclamation, and low-maintenance turf. Call for varieties. **Seeding Rate: Small Areas: 2-3 lbs. per 1000 sq. ft. Larger Areas: 10-15 lbs. per acre drilled; 20-30 lbs. per acre broadcast.**

Buffalograss

Buchloe dactyloides

A short, 4-6", stoloniferous, dense, sod-forming, palatable, native grass common to the prairies. It does not perform well in higher elevations or on sandy sites. Buffalograss sends out above ground stolons which are quite aggressive once mature. Newer turf-type varieties are bred for disease resistance and a deeper green color. Call for varieties. **Seeding Rate: Small Areas: 3-5 lbs. per 1000 sq. ft. Larger Areas: 15-20 lbs. per acre drilled; 20-30lbs. per acre broadcast.**

Sideoats Grama

Bouteloua curtipendula

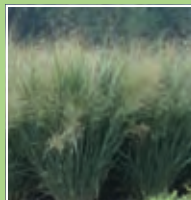

Sideoats Grama is a native, warm season grass growing 18" - 3' tall that produces nutritious, high quality forage. A good seed producer, it can be found on well-drained soils and even in rocky areas up to 8,000'. It is considered excellent for conservation use and grows well, due to vigorous seedling production. Call for varieties. **Seeding Rate: Small Areas: 1-2 lbs. per 1000 sq. ft. Larger Areas: 8-10 lbs. per acre drilled; 16-20 lbs. per acre broadcast.**

Switchgrass

Panicum virgatum

Switchgrass grows 3-6' and is used for soil conservation, pastures, hay production, and possibly for biomass fuels. Best adapted to areas of moist soils, but also drought resistant and winter hardy. The earliest maturing of the native warm season grasses; it is readily consumed by livestock. High yields in first cutting with good re-growth before frost are common. Call for varieties. **Seeding Rate: Small Areas: 1-2 lbs. per 1000 sq. ft. Larger Areas: 5-7 lbs. per acre drilled; 10-14 lbs. per acre broadcast.**

CLOVERS:

Alsike Clover

Trifolium hybridum

An introduced, cool season, perennial legume used as hay, pasture and soil improvement and for honey bee and bumble bee forage. Adapted to a wide range of soil types, good for northern areas and high elevations. Prefers silty clay loams with consistent moisture (18 " plus or irrigation). Not shade tolerant. Usually sown as 25% of a mix with timothy or brome grasses. Pink to white flowers. Height: 2-4 feet.

Seeding Rate: 1/8 lb per 1000 sq ft; 2-4 lbs. per acre

Yellow Blossom Sweet Clover

Melilotus officinalis

A cool-season, drought tolerant, biennial legume used as a ground cover, soil builder, cover crop, for erosion control, and in pasture mixtures and a great source of pollen and nectar. Prefers well drained, fertile soils, but will tolerate clay soils. Do not mow during the first year as it will bloom the second year and then die. Spring seeded sweet clover may be plowed under in the fall or winter of the first year to build organic matter and boost nitrogen levels.

Seeding Rate: Small Areas: 1 lb per 1000 sq ft

White Dutch Clover

Trifolium repens

A cool-season perennial legume used as a ground cover, cover crop, for erosion control, and in pasture mixtures. Often used in lawn seed mixes as it is quick to sprout and provides soil stabilization and nutrients for the lawn grasses. It has a creeping growth habit and spreads with rhizomes or "runners". Height: 6 - 8 inches. Seed alone or into an existing grass stand. Prefers well-drained, fertile soils, but will tolerate clay soils. Can be mowed.

Seeding Rate: 1/4 - 1/2 lb per 1000 sq ft; 8-10 lbs per acre

VETCHES:

American Vetch

Vicia americana

A native, perennial legume that forms a single vining stem with climbing tendrils and clusters of purple flowers, growing 1 to 2 feet tall (long). Spreads through rhizomes and reseeds well. Very drought tolerant and excellent for sunny and partially shady locations. Use as part of a wildlife seed mix with native grasses and wildflowers or a spring cover crop for soil improvement and stabilization. Excellent for grazing and hay and forage for native pollinators. Use as a native alternative for crown vetch for landscaping. Direct sow in the fall.

Seeding Rate: For cover crop: 15-20 lbs vetch per 50 lbs rye or 10 lbs per acre

Hairy Vetch

Vicia villosa

A naturalized, cool season, annual or biennial vetch from Europe having thin branched stems up to 5 feet long, fuzzy leaves and violet/rose to white flower clusters. It prefers fertile loam soils, but is also productive on sandy or clay soils and a fairly shallow root system. Hairy Vetch is used as erosion control, green manure, cover crop, silage or hay and it can provide substantial amounts of nitrogen and dry matter to the soil. Great for spring weed suppression especially mixed with cereal grains such as Winter Rye. Direct sow in the fall.

Seeding Rate: 30-40 lbs per acre; 1 1/4 lbs per 1000 sq ft

Utah Sweetvetch

Hedysarum boreale

Also called Northern Sweetvetch, a native, perennial, cool season, legume with deep taproots making it drought tolerant and winter hardy. Great for soil stabilization and rangeland seedings, nutritious for livestock and wildlife, an important habitat for sage grouse and great forage for pollinators. One of the few native legumes available to use for reclamation with great ability to fix nitrogen. Purple, pink or white flowers arranged in a loose raceme top woody stems with basil leaves. Plant in early spring or, late fall.

Seeding Rate: 13 oz. per 1000 sq ft; 35 lbs per acre

Show your support for our pollinators and help to spread the word about their peril! Use them for educational tools, fun giveaways, social encouragement!

10 – Poster – 18" x 24"

11 – Bumper Sticker – 3" x 11"

ABOUT POLLINATORS!

Often overlooked or misunderstood, pollinators are in fact responsible for 1 out of every 3 bites of food that we eat. In the U.S., bees alone undertake the astounding task of pollinating over \$15 billion in added crop value, particularly for specialty crops such as almonds and other nuts, berries, fruits, and vegetables. Beginning in 2006, pollinators started to decline rapidly in numbers. We, as a seed company, are trying to raise awareness of the vital role that pollinators play in a healthy ecosystem. It's time to think globally & act locally to save our pollinator friends!

Here Are Some Ways that You Can Help:

- Visit your local garden center & plant a garden with flowers that bloom from early spring to late fall.
- Provide safe access to a water source; fill a shallow dish with clean water and add pebbles to act as a landing pad.
- Refrain from pesticide & herbicide use and garden organically!
- Plant a long-blooming mix of wildflowers designed especially for our pollinator friends such as our Butterfly & Bird, Hummingbird, Bee Rescue & Honey Source from www.bbbseed.com
- Work to educate our youth about the importance of pollinators!

Pollinator Stickers

Enjoy these fun, colorful "I love pollinator" stickers created for National Pollinator Week. Use them for educational tools, fun giveaways. 7 different stickers representing 6 different, very important pollinators.

Bee Tins

Support our pollinators with screw-top tins filled with ½ oz. seed mix. Use as handouts, for clubs, fundraisers or just for fun!

• **Bee Rescue Wildflower Seed Mix Tins** (species that are carefully selected to attract native pollinators and honeybees)

• **Honey Source Wildflower Seed Mix Tins** (species that are selected to be especially attractive to the European Honey Bee)

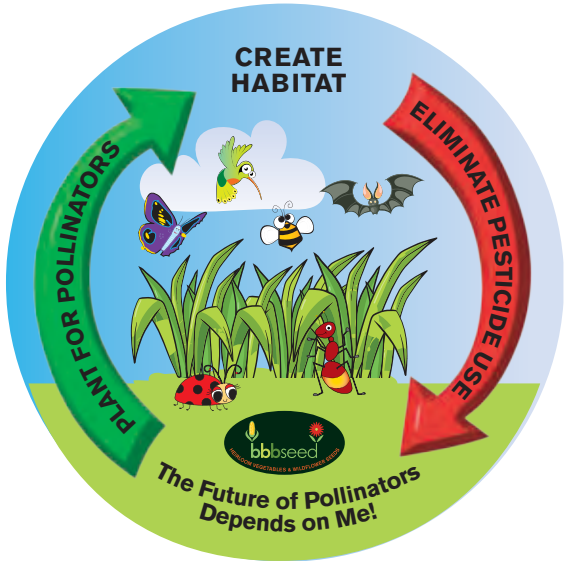

Pollinator Bookmarks

Enjoy these fun, colorful bookmarks created for National Pollinator Week. Use them for educational tools, fun giveaways or impulse purchase items at the sales counter. Representing 6 different, very important pollinators with fun facts for each. Available in packages of 6, one of each pollinator.
